The Trustee will report on the performance of each of the investment funds within In-Tandem against a market index that the Trustee considers best reflects the mix of assets invested in by each fund. If there is no appropriate market index for a particular class of assets, the Trustee will report against a peer group index¹ that the Trustee considers to be useful to investors.

The market index return for each fund is a composite return, calculated using the weighted average return of the benchmark indices used to measure the performance of the underlying funds / assets into which each Fund invests (e.g. shares, fixed interest, cash etc.)

The weighted average return is calculated by multiplying the benchmark return for each asset class by the specific benchmark asset allocation weights of each fund. This market index return provides a relative measure of the funds' performance.

The benchmark indices for each fund are stated in the Performance Objectives section of the Investment Mandates for each asset class, in Appendix A of the Statement of Investment Policy and Objectives (SIPO) which is available on the Scheme's website at www.westpacnzstaffsuper.co.nz. The asset classes that each fund invests in are set out in the table in section 3 of the PDS.

More information about the various indices can be found in the below table (all indices are market indices unless specifically identified as peer group indices).
